

# Network Intercept Scan-on-the-go

## OVERVIEW

### networkintercept SCAN-ON-THE-GO

- Protects multiple machines from malware with one license
- Protects user from identity and content theft
- Removes burden of protection updates from user
- Can be used in conjunction with existing virus protection to enhance current solution

## PLATFORM SUPPORT

- Windows NT, 98, 2000, XP, and Vista
- Mac support will be available by winter 2008

Scan-on-the-go is a patent pending revolutionary new product that enables mobile users to scan any computer they come into contact with while on the go. Scan-on-the-go is a completely portable unique device that is the size of a credit card and can plug into any Windows machine using the USB port. The scanning device is activated as soon as it is plugged in. Seconds later users will know if the machine has any malware or viruses they should beware of before providing their personal information. In its active state, the device will continue to scan the system during the computing session as long as it remains plugged in. This device will not slow down the system, it does not require any downloads, and will not leave a footprint on the machine once removed.

### No need for virus protection updates

Annoying pop up reminders about virus protection updates will become a thing of the past. The device uses patent pending scanning and protection software which does not depend on signature updates. Potential malware can be identified before a patch has been created.

### Features

- Portable virus and malware protection that fits in a wallet
- Patent pending software that does not require manual action for updates from the end user
- Single license multi-computer protection

### Availability and integration

Scan-on-the-go is currently available as a stand alone product but it can also be configured to work in conjunction with Nano-Stealth as well as the Interceptor.net product suite. Please contact [sales@networkintercept.com](mailto:sales@networkintercept.com) for information about pricing or to answer any additional questions.
